

Turn 1 – Member 1 (yash): Introduction + Project Area

Slide: Introduction

“Good morning everyone. Our project is titled VIDHAN: A Gamified Approach to Learning the Indian Constitution with AI Assistance.

The Indian Constitution is extremely vast, detailed, and legally complex. Most students and even adults find it difficult to read, access, or remember important rights and duties. So there is a need for a platform that explains the Constitution in a simple, engaging, and interactive way.

VIDHAN solves this by combining education, gamification, and AI assistance to help the public learn the Constitution in a fun and meaningful way.”

Slide: Project Area & Motivation

“Our project falls under Ed-Tech and Civic-Tech.

The motivation behind VIDHAN is that traditional learning methods are static and boring, which creates a civic knowledge gap among citizens.

Through gamification, interactive quizzes, and AI explanations, we transform learning from a passive activity into an engaging experience.

Our ultimate goal is to empower citizens with constitutional knowledge.”

Turn 2 – Member 2 (aditi): Problem Statement + Aim & Objectives

Slide: Problem Statement

“The Constitution is written in complex legal language. Traditional textbooks or PDFs make it hard for learners to understand or stay interested.

There is no platform that presents the Constitution in a gamified format. People lack awareness of fundamental rights and duties, which affects informed participation in democracy.

So, we identified the need for an interactive and user-friendly system.”

Slide: Aim & Objectives

“The aim of VIDHAN is to simplify constitutional education using games, quizzes, and AI-based learning support.

The main objectives include:

Building a gamified learning platform

Simplifying Articles and legal concepts

Increasing engagement through points, badges, and progress tracking

Helping users connect constitutional concepts to everyday life

Promoting civic confidence and awareness among citizens”

Turn 3 – Member 3 (Tejas): Literature Review

Slide: Literature Survey

“We studied four major works:

1. Constitution Connect (2024)

A MERN-based platform for constitutional literacy. It simplifies Articles but has limited gamification. VIDHAN improves by adding AI-learning and full game levels.

2. LawKey Chatbot (2024)

A legal chatbot using NLP + Reinforcement Learning. It inspired us to integrate an AI assistant that answers constitutional questions.

3. Gamification in E-Learning (2024)

This paper proved that game elements boost motivation, retention, and learning outcomes, which forms the base of VIDHAN's interactive approach.

4. ConstitutionofIndia.net

A research-oriented website with debates, Articles, and commentary. VIDHAN extends this by giving the public interactive and personalised learning.”

Turn 4 – Member 4 (dhanashree): Scope of the project

Slide: Scope of the Project

“The scope includes developing:

A web platform for constitutional learning

Gamified quizzes, games, and interactive modules

AI-based assistance for Articles, Preamble, Rights, Duties

Multilingual support and responsive UI

We excluded advanced legal interpretations and offline mobile applications.”

Slide: Software Requirements (Functional & Non-Functional)

“Functional requirements include user management, quizzes, progress tracking, leaderboard, and content management.

Non-functional requirements include speed, security, scalability, usability, and reliability.

We also defined hardware/software requirements aligned with easily available components.”

Turn 5 – Member 1 (Yash): Architecture + Methodology

Slide: System Architecture

“Our system architecture has 5 layers:

Frontend: ReactJS

Backend: Spring Boot

Database: MySQL

Chatbot Module: Python NLP model

Gamification Module: React engine + animations

All these modules communicate through APIs to provide a smooth and interactive experience.”

Slide: Methodology

“We followed a structured methodology:

Requirement analysis

System design

Content preparation

Frontend/backend development

Chatbot integration

Gamification implementation

Testing & deployment

User feedback & improvements”

Turn 6 – Member 2 (Tejas): Game Examples

Slide: Gamification Examples

“We designed two example games:

Game 1 – Article 21: Right to Life

Users see scenarios and must quickly decide whether a situation violates Article 21. This helps users understand real-life rights.

Game 2 – Preamble Builder

Words of the Preamble appear jumbled. Users drag and arrange them correctly, helping them memorize the Preamble.”

Turn 7 – Member 3 (Dhanashree): UML Diagrams

Slides: UML Diagrams

“We created complete UML diagrams:

Use Case Diagram showing user, admin, and system interactions

Activity Diagram showing step-by-step flow

Sequence Diagram showing module communication

Class Diagram showing system structure

These diagrams represent the system architecture and interactions clearly and formally.”

Turn 8 – Member 4 (Aditi): Conclusion + Future Scope

Slide: Conclusion

“Our project demonstrates how technology can modernize civic education.

VIDHAN combines the foundational text of the Constitution with AI-powered explanations and game-based learning to make education accessible, engaging, and memorable.”

Slide: Future Scope

“Our future enhancements include:

Support for BNS, BNSS, and BSA (new criminal justice laws)

Personalized AI learning paths

Multiplayer quizzes and competitions

Mobile app version

More regional languages

Landmark case modules

Teacher dashboards and classroom use”
